

ggplot2数据可视化：速查表

基础

ggplot2 基于图形语法，使用相同的组件（数据集、坐标系统和表示数据点的几何对象）来构建图片。

为了获取显示值，数据中的变量映射到图形的视觉属性，如大小、颜色以及x和y位置。

完成以下模板来构建图形

```
ggplot (data = <DATA> ) +  
<GEOM_FUNCTION> (mapping = aes(<MAPPINGS>),  
  stat = <STAT>, position = <POSITION> ) +  
<COORDINATE_FUNCTION> +  
<FACET_FUNCTION> +  
<SCALE_FUNCTION> +  
<THEME_FUNCTION>
```

ggplot(data = mpg, aes(x = cty, y = hwy)) 通过添加图层来完成图形，每层添加一个geom函数。

qplot(x = cty, y = hwy, data = mpg, geom = "point") 用给定的数据、几何对象和映射创建完整的图片。绘图函数提供许多有用的默认设置。

last_plot() 返回上一个图片

ggsave("plot.png", width = 5, height = 5) 将最后一个图片保存至工作目录中名为“plot.png”的5'x 5'文件。文件类型与文件扩展名相匹配。

几何对象

使用geom函数表示数据点，使用geom的属性表示变量。每个函数绘制一个图层。

基本图像

```
a <- ggplot(economics, aes(date, unemploy))
```

```
b <- ggplot(seals, aes(x = long, y = lat))
```

```
a + geom_blank()  
(Useful for expanding limits)
```

```
b + geom_curve(aes(yend = lat + 1,  
  xend = long + 1, curvature = z)) - x, xend, y, yend, alpha,  
  angle, color, curvature, linetype, size
```

```
a + geom_path(lineend = "butt", linejoin = "round",  
  linemitre = 1)  
x, y, alpha, color, group, linetype, size
```

```
a + geom_polygon(aes(group = group))  
x, y, alpha, color, fill, group, linetype, size
```

```
b + geom_rect(aes(xmin = long, ymin = lat, xmax = long + 1,  
  ymax = lat + 1)) - xmax, xmin, ymax, ymin, alpha,  
  color, fill, linetype, size
```

```
a + geom_ribbon(aes(ymin = unemploy - 900,  
  ymax = unemploy + 900)) - x, ymax, ymin, alpha,  
  color, fill, group, linetype, size
```

分段线

常用参数: x, y, alpha, color, linetype, size

```
b + geom_abline(aes(intercept = 0, slope = 1))  
b + geom_hline(aes(yintercept = lat))  
b + geom_vline(aes(xintercept = long))
```

```
b + geom_segment(aes(yend = lat + 1, xend = long + 1))  
b + geom_spoke(aes(angle = 1:1155, radius = 1))
```

单一变量 连续

```
c <- ggplot(mpg, aes(hwy)); c2 <- ggplot(mpg)
```

```
c + geom_area(stat = "bin")  
x, y, alpha, color, fill, linetype, size
```

```
c + geom_density(kernel = "gaussian")  
x, y, alpha, color, fill, group, linetype, size,  
  weight
```

```
c + geom_dotplot()  
x, y, alpha, color, fill
```

```
c + geom_freqpoly() x, y, alpha, color, group,  
  linetype, size
```

```
c + geom_histogram(binwidth = 5) x, y, alpha,  
  color, fill, linetype, size, weight
```

```
c2 + geom_qq(aes(sample = hwy)) x, y, alpha,  
  color, fill, linetype, size, weight
```

离散

```
d <- ggplot(mpg, aes(fl))
```

```
d + geom_bar()  
x, alpha, color, fill, linetype, size, weight
```

双变量

连续x、连续y

```
e <- ggplot(mpg, aes(cty, hwy))
```

```
e + geom_label(aes(label = cty), nudge_x = 1,  
  nudge_y = 1, check_overlap = TRUE) x, y, label,  
  alpha, angle, color, family, fontface, hjust,  
  lineheight, size, vjust
```

```
e + geom_jitter(height = 2, width = 2)  
x, y, alpha, color, fill, shape, size
```

```
e + geom_point(), x, y, alpha, color, fill, shape,  
  size, stroke
```

```
e + geom_quantile(), x, y, alpha, color, group,  
  linetype, size, weight
```

```
e + geom_rug(sides = "bl"), x, y, alpha, color,  
  linetype, size
```

```
e + geom_smooth(method = lm), x, y, alpha,  
  color, fill, group, linetype, size, weight
```

```
e + geom_text(aes(label = cty), nudge_x = 1,  
  nudge_y = 1, check_overlap = TRUE) x, y, label,  
  alpha, angle, color, family, fontface, hjust,  
  lineheight, size, vjust
```

离散x、连续y

```
f <- ggplot(mpg, aes(class, hwy))
```

```
f + geom_col(), x, y, alpha, color, fill, group,  
  linetype, size
```

```
f + geom_boxplot(), x, y, lower, middle, upper,  
  ymax, ymin, alpha, color, fill, group, linetype,  
  shape, size, weight
```

```
f + geom_dotplot(binaxis = "y", stackdir =  
  "center"), x, y, alpha, color, fill, group
```

```
f + geom_violin(scale = "area"), x, y, alpha, color,  
  fill, group, linetype, size, weight
```

离散x、离散y

```
g <- ggplot(diamonds, aes(cut, color))
```

```
g + geom_count(), x, y, alpha, color, fill, shape,  
  size, stroke
```

三变量

```
seals$z <- with(seals, sqrt(delta_long^2 + delta_lat^2)) l <- ggplot(seals, aes(long, lat))
```

```
l + geom_contour(aes(z = z))  
x, y, z, alpha, colour, group, linetype,  
  size, weight
```

连续二元分布

```
h <- ggplot(diamonds, aes(carat, price))
```

```
h + geom_bin2d(binwidth = c(0.25, 500))  
x, y, alpha, color, fill, linetype, size, weight
```

```
h + geom_density2d()  
x, y, alpha, colour, group, linetype, size
```

```
h + geom_hex()  
x, y, alpha, colour, fill, size
```

连续函数

```
i <- ggplot(economics, aes(date, unemploy))
```

```
i + geom_area()  
x, y, alpha, color, fill, linetype, size
```

```
i + geom_line()  
x, y, alpha, color, group, linetype, size
```

```
i + geom_step(direction = "hv")  
x, y, alpha, color, group, linetype, size
```

误差的呈现方式

```
df <- data.frame(grp = c("A", "B"), fit = 4:5, se = 1:2)  
j <- ggplot(df, aes(grp, fit, ymin = fit-se, ymax = fit+se))
```

```
j + geom_crossbar(fatten = 2)  
x, y, ymax, ymin, alpha, color, fill, group, linetype, size
```

```
j + geom_errorbar(), x, ymax, ymin, alpha, color,  
  group, linetype, size, width (also geom_errorbarh())
```

```
j + geom_linerange()  
x, ymin, ymax, alpha, color, group, linetype, size
```

```
j + geom_pointrange()  
x, y, ymin, ymax, alpha, color, fill, group, linetype,  
  shape, size
```

地图

```
data <- data.frame(murder = USArrests$Murder,  
  state = tolower(rownames(USArrests)))  
map <- map_data("state")  
k <- ggplot(data, aes(fill = murder))
```

```
k + geom_map(aes(map_id = state), map = map)  
+ expand_limits(x = map$long, y = map$lat),  
  map_id, alpha, color, fill, linetype, size
```

```
l + geom_raster(aes(fill = z), hjust=0.5, vjust=0.5,  
  interpolate=FALSE)  
x, y, alpha, fill
```

```
l + geom_tile(aes(fill = z)), x, y, alpha, color, fill,  
  linetype, size, width
```

统计变换

另一种构建图层的方法

统计变化构建新变量来绘图（例如，count，prop）。

通过更改geom函数的默认统计信息，**geom_bar(stat="count")** 或者使用统计变化功能来绘图**stat_count(geom="bar")**，其调用默认图片来创建一个图层（相当于geom函数）。使用 **..name..** 语法将统计变化映射到坐标。

```
c + stat_bin(binwidth = 1, origin = 10)
x, y | ..count.., ..ncount.., ..density.., ..ndensity..
c + stat_count(width = 1) x, y, | ..count.., ..prop..
```

```
c + stat_density(adjust = 1, kernel = "gaussian")
x, y, | ..count.., ..density.., ..scaled..
e + stat_bin_2d(bins = 30, drop = T)
x, y, fill | ..count.., ..density..
e + stat_bin_hex(bins=30) x, y, fill | ..count.., ..density..
e + stat_density_2d(contour = TRUE, n = 100)
x, y, color, size | ..level..
```

```
e + stat_ellipse(level = 0.95, segments = 51, type = "t") ...
l + stat_contour(aes(z = z)) x, y, z, order | ..level..
l + stat_summary_hex(aes(z = z), bins = 30, fun = max)
x, y, z, fill | ..value..
l + stat_summary_2d(aes(z = z), bins = 30, fun = mean)
x, y, z, fill | ..value..
f + stat_boxplot(coef = 1.5) x, y | ..lower..,
..middle.., ..upper.., ..width.., ..ymin.., ..ymax..
```

```
f + stat_ydensity(kernel = "gaussian", scale = "area") x, y |
..density.., ..scaled.., ..count.., ..n.., ..violinwidth.., ..width..
e + stat_ecdf(n = 40) x, y | ..x.., ..y..
e + stat_quantile(quantiles = c(0.1, 0.9), formula = y ~
log(x), method = "rq") x, y | ..quantile..
```

```
e + stat_smooth(method = "lm", formula = y ~ x, se=T,
level=0.95) x, y | ..se.., ..x.., ..y.., ..ymin.., ..ymax..
ggplot() + stat_function(aes(x = -3:3), n = 99, fun =
dnorm, args = list(sd=0.5)) x | ..x.., ..y..
e + stat_identity(na.rm = TRUE)
ggplot() + stat_qq(aes(sample=1:100), dist = qt,
dparam=list(df=5)) sample, x, y | ..sample.., ..theoretical..
e + stat_sum() x, y, size | ..n.., ..prop..
e + stat_summary(fun.data = "mean_cl_boot")
h + stat_summary_bin(fun.y = "mean", geom = "bar")
e + stat_unique()
```

标尺

将映射数据缩放放到较为美观的比例。添加新的标尺来改变映射。

标尺的一般用法
scale_*_continuous() - 将数据的连续取值映射为图形属性的取值
scale_*_discrete() - 将数据的离散取值映射为图形属性的取值
scale_*_identity() - 使用数据的值作为图形属性的取值
scale_*_manual(values = c()) - 将数据的离散取值作为手工指定的图形属性的取值
scale_*_date(date_labels = "%m/%d"), date_breaks = "2 weeks") - 将数据值视为日期
scale_*_datetime() - 将数据x视为时间
参数和scale_x_date()一样。有关标签格式请参阅striptime

调整x和y的比例
调整x和y的标尺(使用x为例)
scale_x_log10() - 以log10比例绘制x
scale_x_reverse() - 反转x轴方向
scale_x_sqrt() - 以平方根绘制x

颜色和填充比例（离散）
n <- d + geom_bar(aes(fill = fl))
n + scale_fill_brewer(palette = "Blues")
选择调色板：RColorBrewer::display.brewer.all()
n + scale_fill_grey(start = 0.2, end = 0.8, na.value = "red")

颜色和填充比例（连续）
o <- c + geom_dotplot(aes(fill = ..x..))
o + scale_fill_distiller(palette = "Blues")
o + scale_fill_gradient(low="red", high="yellow")
o + scale_fill_gradient2(low="red", high="blue", mid = "white", midpoint = 25)

o + scale_fill_gradientn(colours=topo.colors(6))
Also: rainbow(), heat.colors(), terrain.colors(), cm.colors(), RColorBrewer::brewer.pal()

形状和尺寸比例
p <- e + geom_point(aes(shape = fl, size = cyl))
p + scale_shape() + scale_size()
p + scale_shape_manual(values = c(3:7))
p + scale_radius(range = c(1,6))
p + scale_size_area(max_size = 6)

坐标系统

```
r <- d + geom_bar()
r + coord_cartesian(xlim = c(0, 5))
xlim, ylim
默认笛卡尔坐标系
r + coord_fixed(ratio = 1/2)
ratio, xlim, ylim
x和y单位之间固定长宽比的笛卡尔坐标
r + coord_flip()
xlim, ylim
翻转的笛卡尔坐标
r + coord_polar(theta = "x", direction=1)
theta, start, direction
极坐标
r + coord_trans(ytrans = "sqrt")
xtrans, ytrans, limx, limy
转换后的笛卡尔坐标。将xtrans和ytrans设置为窗口函数的名称。
pi + coord_quickmap()
pi + coord_map(projection = "ortho", orientation=c(41, -74, 0))
projection, orienztation, xlim, ylim
从mapproj包中映射投影(mercator (default), azequalarea, lagrange, etc.)
```

位置调整

位置调整决定了如何安排原本会占据相同空间的图例。

```
s <- ggplot(mpg, aes(fl, fill = drv))
s + geom_bar(position = "dodge")
s + geom_bar(position = "fill")
s + geom_point(position = "jitter")
s + geom_label(position = "nudge")
s + geom_bar(position = "stack")
```

每个位置调整都可以重新编写为具有手动宽度和高度参数的函数
s + geom_bar(position = position_dodge(width = 1))

主题

```
r + theme_bw()
r + theme_classic()
r + theme_light()
r + theme_linedraw()
r + theme_gray()
r + theme_minimal()
r + theme_void()
r + theme_dark()
```

分面

根据一个或多个离散变量划分子图。

```
t <- ggplot(mpg, aes(cty, hwy)) + geom_point()
t + facet_grid(. ~ fl)
t + facet_grid(year ~ .)
t + facet_grid(year ~ fl)
t + facet_wrap(~ fl)
t + facet_grid(drv ~ fl, scales = "free")
t + facet_grid(drv ~ fl, labeller = label_both)
t + facet_grid(fl ~ ., labeller = label_bquote(alpha ^ .(fl)))
t + facet_grid(. ~ fl, labeller = label_parsed)
```

fl: c	fl: d	fl: e	fl: p	fl: r
t + facet_grid(fl ~ ., labeller = label_bquote(alpha ^ .(fl)))	t + facet_grid(fl ~ ., labeller = label_bquote(alpha ^ .(fl)))	t + facet_grid(fl ~ ., labeller = label_bquote(alpha ^ .(fl)))	t + facet_grid(fl ~ ., labeller = label_bquote(alpha ^ .(fl)))	t + facet_grid(fl ~ ., labeller = label_bquote(alpha ^ .(fl)))
c	d	e	p	r

标签

t + labs(x = "New x axis label", y = "New y axis label", title = "Add a title above the plot", subtitle = "Add a subtitle below title", caption = "Add a caption below plot", <AES> = "New <AES> legend title")
t + annotate(geom = "text", x = 8, y = 9, label = "A")

图例

n + theme(legend.position = "bottom")
放置图例: "bottom", "top", "left", or "right"
n + guides(fill = "none")
设置图例类型: colorbar, legend, or none (no legend)

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
使用scale函数设置图例标签

缩放

没有裁剪（推荐）
t + coord_cartesian(xlim = c(0, 100), ylim = c(10, 20))
裁剪（删除看不见的数据点）
t + xlim(0, 100) + ylim(10, 20)
t + scale_x_continuous(limits = c(0, 100)) + scale_y_continuous(limits = c(0, 100))
